STATE DEMOGRAPHIC CENTER

POPULATION NOTES

Migration Profiles for Minnesota Public Use Microdata Areas

Martha McMurry

Most Americans move many times throughout their lifetimes, and they move for many reasons. Young adults in their late teens and twenties are the most mobile group in our society. They move in large numbers to attend college, start careers and families, or join the military. As people age into their thirties and forties, they move to change houses or because their jobs or family situations change. Later in life, many people move at the time of retirement, usually to a place with a desirable climate, pleasant scenery or a low cost of living. At more advanced ages, moves are often related to poor health and growing dependency.

This report presents migration data based on the 2000 Census Public Use Microdata Sample (PUMS) to look at how migration streams affect different regions of Minnesota. The Public Use Microdata Sample is a 5 percent sample of the raw data from the Census long form. Because the file includes raw data, it is possible to do customized data analysis rather than relying on published census tables. The tradeoff is that there is not as much geographic detail as in other census data. Each Public Use Microdata Area, or PUMA, must contain a

minimum of 100,000 people, and detailed geographic information is removed from the file. The PUMAs are defined by the Census Bureau in consultation with state and local governments. Technical documentation, maps and geographic equivalency files can be found on the Census Bureau web site at: <http://www.census.gov/Press-Release/www/2003/PUMS5.html>

Unfortunately, in some cases the data on migration provides even less geographic detail than the basic PUMS file. Residence in 1995 is based on what are called "Migration Public Use Microdata Areas" rather than the Public Use Microdata Areas used to delimit 2000 residence. Migration Public Use Microdata Areas must contain at least one entire county. Minnesota's four largest counties – Hennepin, Ramsey, Dakota and Anoka – include more than one Public Use Microdata Area. For these four counties, it is not possible to obtain in- and out-migration data for the subcounty PUMAs. Thus the data do not allow us to distinguish between a person who moved from Minneapolis to Rogers and a person who moved from one Minneapolis neighborhood to another. It is

possible, however, to look at in-migration into the different parts of these four counties from outside the county, and this in-migration data is presented in this report.

Life cycle affects migration

Life cycle stages have a powerful effect on migration. Regions with college and university campuses attract large numbers of students and export large numbers of recent college graduates. Suburban regions export college students and import families with children. The central cities and to some extent the inner-ring suburbs attract young, ethnically diverse, and educated people while exporting older people and affluent families.

The following tables show some of the characteristics of in- and out-migrants for the 23 Migration PUMAs in Minnesota. Characteristics examined include age, place of birth, race and ethnicity, and poverty status. In addition, the tables look at in- and out-migration among the following groups:

- Traditional age college students, defined as people age 18 to 22 who are attending college.

- Young college graduates, defined as people age 23 to 34 who are college graduates.
- Young retirees, defined as people age 55 to 74 who are not in the labor force.
- Middle-income and affluent married people, defined as people who are married and living in a household with an income of \$50,000 or more.
- Public assistance recipients, defined as people receiving \$1,000 or more in public assistance income.

The Public Use Microdata Areas are described briefly below. For more detailed information on the areas included in each Microdata Area, see the technical documentation on the Census Bureau web site.

Public Use Microdata Area 00100 is located in northwestern Minnesota. It includes Kittson, Roseau, Marshall, Pennington, Red Lake, Polk, Norman and Clay Counties. The presence of Minnesota State University Moorhead and Concordia College affects migration in this region.

Public Use Microdata Area 00200 covers the Detroit Lakes-Bemidji area. It includes Lake of the Woods, Beltrami, Clearwater, Mahnomon, Becker and Hubbard counties.

Public Use Microdata Area 00300 is the only noncontiguous PUMA. It includes Lake and Cook counties in the extreme northeastern part of the state as well as Koochiching, Itasca and Cass counties in the far north central part of the state. These two sections are separated by St. Louis County.

Public Use Microdata Area 00400 is St. Louis County, including the city of Duluth.

Public Use Microdata Area 00500 covers the booming area around Brainerd. Counties include Crow Wing, Aitkin, Carlton, Mille Lacs, Kanabec and Pine.

Located in central Minnesota, Public Use Microdata Area 00600 includes Douglas, Wadena, Todd and Morrison counties.

Public Use Microdata Area 00700 includes a number of counties in west central Minnesota — Otter Tail, Stevens, Wilkin, Traverse, Grant, Big Stone, Pope and Swift.

Public Use Microdata Area 00800 includes Benton and Stearns counties. St. Cloud is the major city, and college student migration is significant.

Public Use Microdata Area 00900 covers the fast-growing suburban counties of Chisago, Isanti, Sherburne and Wright.

Public Use Microdata Areas 01001 and 01002 combined make up Anoka County. Public Use Microdata Area 01001 is the eastern portion of the county, while Public Use Microdata Area 01002 is the western portion.

Public Use Microdata Area 01100 includes fast-growing and prosperous Carver and Scott counties in the Twin Cities suburbs.

Suburban Dakota County includes three Public Use Microdata Areas: 01201, 01202 and 01203. PUMA 012001 is in the north central

part of the county and includes the Eagan-Inver Grove Heights-Mendota area. PUMA 012002 includes the Apple Valley-Burnsville area. PUMA 012003 is the southern part of the county, including Hastings, Lakeville and Rosemount.

Public Use Microdata Areas 01301, 01302, 01303, 01401, 01402, 01403, 01404, 01405 and 01406 are all included in Hennepin County, Minnesota's largest county with an estimated 1.1 million people. Hennepin County includes six suburban Public Use Microdata Areas as well as three PUMAs within Minneapolis. Public Use Microdata Area 01301 includes the north and northeast parts of Minneapolis and the area around the University of Minnesota. Public Use Microdata Area 01302 covers the southwest part of Minneapolis and includes the downtown and Uptown neighborhoods. Public Use Microdata Area 01303 includes the southeastern part of Minneapolis. Public Use Microdata Area 01401 includes the western half of Hennepin County and the part farthest north, a less densely settled suburban area. Public Use Microdata Area 01402 lies north and east of Minneapolis. Some of the communities included in whole or part are Brooklyn Park, Maple Grove, Osseo and Plymouth. Public Use Microdata Area 01403 includes northern inner ring suburbs around Minneapolis such as Crystal, Golden Valley and Robbinsdale. Public Use Microdata Area 01404 is in the south central part of Hennepin County and covers the cities of Eden Prairie and Minnetonka. Public Use Microdata Area 01405 lies

just west of Minneapolis and includes the older suburbs of Edina, Hopkins and St. Louis Park. Public Use Microdata Area 01406 lies south of Minneapolis and includes Bloomington and Richfield.

Public Use Microdata Areas 01501, 01502, 01601 and 01602 are all included in Ramsey County, the state's second-largest population center. Ramsey County includes two central city Public Use Microdata Areas and two suburban PUMAs. Public Use Microdata Area 01501 includes the northern, western and eastern parts of St. Paul. Public Use Microdata Area 01502 is the central core of St. Paul. Public Use Microdata Area 01601 includes northern Ramsey County suburbs such as Arden Hills, Shoreview, Vadnais Heights, White Bear Lake and Mounds View. Public Use Microdata Area 01602 includes suburbs next to St. Paul such as Falcon Heights, Maplewood and Roseville.

All of PUMA 01700 is included in Washington County, a county east of St. Paul that fits the suburban profile.

Public Use Microdata Area 01800 lies west of the Twin Cities and includes the counties of Kandiyohi, Meeker, McLeod, Sibley and Renville. Hutchinson and Willmar are among the major cities in the region.

Public Use Microdata Area 01900 includes seven counties in southwestern Minnesota: Lac Qui Parle, Chippewa, Yellow Medicine, Lincoln, Lyon, Redwood and Brown. This is a predominantly rural, agricultural area. Marshall and New Ulm are among the larger cities.

Public Use Microdata Area 02000, located southeast of the Twin Cities, includes Blue Earth, Nicollet and Waseca counties. Mankato is the major city. University and college campuses in Mankato and St. Peter affect the migration trends in this region.

Public Use Microdata Area 02100 includes LeSueur, Rice and Goodhue counties just south of the Twin Cities. Northfield and Red Wing are among the major cities. Northfield has two colleges which have a powerful effect on migration.

Public Use Microdata Area 02200 is in southeastern Minnesota. It includes four counties: Wabasha, Winona, Fillmore and Houston. The state university campus in Winona has a pronounced influence on migration.

Public Use Microdata Area 02300 is coterminous with Olmsted County, including the city of Rochester.

Four counties near the Iowa border, Steele, Dodge, Freeborn and Mower, are included in Public Use Microdata Area 02400. Agriculture is important in this region, but so are manufacturing and other industries.

Public Use Microdata Area 02500 is in a heavily agricultural area in the southwest corner of Minnesota and along the Iowa border. It consists of nine counties: Pipestone, Murray, Cottonwood, Watonwan, Rock, Nobles, Jackson, Martin and Faribault. Albert Lea and Worthington are some of the larger cities.

**Characteristics of In- and Out-migrants by Public Use Microdata Area (PUMA) from Public Use Microdata (PUMS)
5% Sample for Minnesota**

PUMA 00100: Kittson, Roseau, Marshall, Pennington, Red Lake, Polk, Norman and Clay Counties
